

ACCESSIBLE AI FOR EDUCATION

EchoGraph

Turns visual-only charts and diagrams into spoken explanations students can hear, explore, and question.

LIVE MISTRAL VISION ANALYSIS

Spoken descriptions for blind and low-vision students.

Summary

This line chart illustrates how temperature affects the activity of the enzyme amylase, measured as a percentage of the maximum reaction rate. The enzyme activity peaks at around 37°C, indicating the optimal temperature for amylase function, and declines sharply at higher temperatures due to

WHO WE BUILT FOR

Blind and low-vision students

Students like Amara, 16, whose screen reader cannot explain the science inside a visual worksheet.

THE BARRIER

Visual-only learning material

Charts, axes, spatial relationships, and labels are often invisible to assistive technology.

THE OUTCOME

Independent exploration

A learner can listen, inspect values, compare elements, ask questions, and review at their own pace.

How EchoGraph works

A secure, multimodal learning pipeline - from image to understanding.

ACCESSIBILITY IS THE PRODUCT, NOT AN ADD-ON

Voice input | Spoken output | Keyboard navigation | High contrast | Adjustable detail and speed | Data sonification
